"SNAPS" For Greenhouse Forcing

Snapdragon being one of the leading Florist Greenhouse crops, we have followed very closely the development of the Winter Flowering or Forcing type and offer the following approved varieties.

There are mainly three classes of Snapdragons; early, intermediate and spring flowering. The early varieties will flower much better in the North during winter months under low-light intensity and low temperatures, whereas planted in the South, with more light, they set buds earlier and do not make as large a spike. Second-early or intermediates are fairly good for winter, but better after "Mums", and the late or spring flowering varieties, which are stronger growing and more vegetative, should be used only after "Mums". First sowings are generally made between June 15th and July 10th, and selection of varieties made according to locality and climatic conditions. Sowing of seed in Summer should be done in the coolest and shadiest spot available, and with good circulation of air. The soil for growing should be porous and well drained. Raised benches are preferable to ground beds for winter crop. High nutrition, especially Nitrogen, and water combined during the dark days should be avoided as the results will be soft growth and off-colored shattery flowers.

Becoming more popular each year is the single-stem culture, used almost entirely in the growing of Stocks. This method produces better quality and more uniform spikes as the vigor and strength of the plant are devoted to one flower spike. Do not make sowings, however, for single-stem culture until after Mid-August, for with the light days of early Fall plants bloom too short. Sowings can be made periodically through the Fall and Winter. Where this method is used seed can be sowed a month later than plants that are pinched for the same blooming time. This method takes just a few more seeds and plants, but the results of the higher quality crop will more than repay. A spacing of 4 x 6 inches is used.

In the early pink and rose shades, **Christmas Cheer** is the finest rose-pink. **Dorcas Jane** illustrated in color on the cover, is a beautiful light pink, slightly larger flower than Mary Ellen and a little earlier, having a clean habit of growth and fine long spikes. **Maryland Pink** and **Mary Ellen** the last named illustrated in color on the cover, are excellent light pinks. **Better Times** is a deep American Beauty rose. These five are first-cross hybrids from known parentage; excellent early varieties and give maximum production in the winter months. **Yoder's No. 33**, an early long stemmed medium rose pink of Mary Ellen type and **Ball's Early Pink** are also in the early pink class.

In the next or intermediate type, the most popular are the old standby **Cheviot Maid** Reselected and **Delworth Supreme**, the finest Cheviot Maid selection today. Also popular are **Rose Queen**, **Gilbert's Pink Supreme**, **La France** and **Daybreak**. Most of this group can be planted for winter flowering but the early sorts are more productive in our latitude during the dark winter days.

For after "Mums", **Peggy Schumann** is a fine rose with heavy stems and fine spikes, as is **Light Pink Peggy** is another. **Marie Louise** and **St. Louis Pink** are both fine light pinks. **America**, **New Cincinnati**, with its fine long spike, fit in here.

In the early whites, **Koester's White** and **White Wonder Improved** are early pure whites, the latter slightly heavier. **Margaret**, illustrated in color on the cover, is considered by most growers

to be the finest winter white on the market, a fine winter blooming white with long spike having same type growth as Mary Ellen pink, but slightly earlier and closer set ivory white spike. **Schlegel's White** is another wonderful early white with a long tapering spike. Next in earliness are **Feist's White**, a true sport of Cheviot Maid Pink, and **Peace**. **Lucky Strike Improved** is a popular pure white, growing three to four feet with full spike of flowers. It blooms earlier than the original. Still grown by many for early, mid-season and late. **Early Westover White Fringed** is a selection of this late sort. For after "Mums" or Spring Flowering, **Marion White**, **Snow White**, **Junglewood White** and **White Peggy Schumann**. Also a new all double variety **Snowdrift** which is a fine novelty and should be sowed only to follow "Mums" for spring flowering.

In the yellows, the earliest are **Yellow Wonder**, **Ceylon Court**, dark selection which is heavier and darker, and **Goldie** which resembles a shorter Ceylon Court. **Schlegel's Yellow** produces a good spike, although lighter in color. **Frances Schlegel** is a deep golden yellow having a good stem and spike. **Gilbert's Yellow**, fits in here as it resembles **Ethel** but has a sturdier stem and freer branching habit topped by a quality spike. **Carol Jean** has a larger flower and is slightly lighter than **Ethel** which remains the most popular yellow on the market although a little later to flower. To follow "Mums" are **Sunray**, **Yellow Peggy Schumann**, **Coates' Yellow**, **Klondyke Supreme** and **Junglewood Yellow**. **Witterstaetter's Yellow**, is a fine new introduction for after "Mum" planting and is far superior to many we are growing today, having a longer spike, larger flowers and a deep yellow color. Vigorous non-grassy growth.

In the bronzes, the finest early is **Lady Dorothy**, a new reddish bronze **Suntan** and **Sunlite**, both early but considerably lighter in color. **Afterglow**, which is slightly later and heavier, still is very popular. **Gilbert's Bronze Beauty** fits in here with its long spike. **Bronze Christmas Cheer**, not as early as its name implies, is an open pollinated variety of heavier growth. **Talisman**, a nearly all-double, is a retail novelty and an early bloomer. For after "Mums", there are **Glorious**, an intense Afterglow color, **Ideal Improved**, **Miss Wooster**, **Bronze Peggy Schumann** and **Witterstaetter's Bronze**, a clear golden bronze of this year's introduction, with a large well spaced spike, that can be pinched low.

In the Reds an excellent new variety is **Shisler's Red**, which blooms as early as our earliest whites and pinks being, a glowing wine-red, 100% true to color, uniform growth with an excellent stem free of grass. If sown July 5th and pinched September 15th, it will bloom from Thanksgiving on. For after "Mums" **Velvet Supreme**, a scarlet-crimson, and longer spiked **Velvet Beauty** are popular, being joined by **Schumann's Velvet Red**.

In the lilacs or lavenders, **Windmill Lilac** is the earliest, although not a winter producer. **Witterstaetter's Orchid**, a large well spaced spike, with a very rich and even orchid color. Good grower, can be pinched low, a mid-season variety. **Ball Lavender** and **Schumann's Lavender**, are later and to be planted after "Mums" as all in this class should be.

Varieties followed by (X) are sold in 1/2 trade pkts. at 60c each. Varieties preceded by a star (*) are best for early winter flowering.

Calceolaria Hybrida

These Make Wonderful Plants for Easter or Mother's Day

For Calceolarias, use a mixture of loam, leafmold and sharp sand. This mixture is suitable both for the seed pans and the pots into which the seedlings, when ready, should be planted. Perfect drainage is important. Calceolaria seed being very fine the seedling should be done with great care and it is suggested that one use a sheet of white paper on which a tablespoon of white sand is distributed. Then shake the seed on top of this sand and mix thoroughly. Then, sprinkle this mixture on the soil of the seed pan, dusting surface with a little fine sand, cover with a sheet of glass and place in the shade. For moisture, immerse the pans in water. As the seedlings come up lift them carefully when quite small and prick them off into a flat allowing two inches square for each plant. It is important that the leaves of one plant should never be allowed to overlap those of another or decay will probably result. When established in pots shift them into the larger size. At the last shift give them some manure water, not too strong, about once a week.

PANSY VAUGHAN'S IMPROVED SWISS GIANT MIXTURE

PANSIES

Pansies have long been a favorite with us. We introduced the Swiss Giants to American gardens and named and introduced the lovely Canadian variety, Maple Leaf, several years ago.

VAUGHAN'S IMPROVED SWISS GIANT MIXTURE

The flowers of this strain are of enormous size, 3 inches and over in diameter. They are perfectly round with overlapping petals, borne on strong stalks well above the remarkably luxuriant foliage. Thick petals, of a rich velvety texture, give this strain of pansy the required substance so necessary to a perfect pansy.

The superb colors and color combinations—are their distinctive feature. Excellent for greenhouse culture. Trade pkt., 60c; $\frac{1}{8}$ oz., \$1.30; $\frac{1}{4}$ oz., \$2.25; oz., \$8.00; 4 oz., \$30.00.

VAUGHAN'S SUPER SWISS GIANT MIXTURE

ANCHUSA Italica Dropmore Variety

ALYSSUM Saxatile Compactum

ANEMONE St. Brigid's Hybrids

We recommend sowing perennial seeds in spring. Seed germinates better in the cool weather than in the heat of mid-summer, and the long growing season produces larger plants that winter over more successfully.

Seeds of Biennials and Hardy Perennials

Perennials fill a large and interesting place in the operations of an up-to-date florist establishment. Some are as easily raised as annuals; quite a few may be forced; others make fine pot plants; and many furnish splendid cutting material. The rock garden requirements absorb all the low-growing varieties and the florist with his eye to the future will devote considerable space to perennials of all kinds. They require little heat, if any, and not much care.

SEED GERMINATES SLOWLY AND IRREGULARLY

Of the following varieties and a seed bed should be prepared where it will be undisturbed for a year or more.

Aconitum, Anemone, Clematis, Delphinium Cardinale, Delphinium Nudicaule, Dictamnus, Dielytra, Iris, Phlox Decussata, Primulas Trollius and nearly all Alpines.

Rock Garden subjects are marked X.

Sodium Selenate Makes Plants Poison Insects

Sodium selenate, which Dr. W. E. Blauvelt of Cornell University told a florists' meeting at Cornell University, "is out of the experimental stage," when applied to the soil in a greenhouse bench is absorbed by the plants, and makes them poisonous to insects.

Over 18,000 pounds have been used in 1946, sufficient to treat over a hundred fifty million square feet of greenhouse bench area. One treatment of the soil is effective for three to six months.

Not all insects are affected. It works best with soft plants like chrysanthemums, carnations, gladioli, cyclamens, saintpaulias, etc., and has not been found entirely effective on woody plants. It kills red spider and aphid on chrysanthemums and carnations, cyclamen mites on chrysanthemums and saintpaulias, foliar nematodes and midge on chrysanthemums.

Complete instructions for use are sent with the material and must be followed closely.

PURE SODIUM SELENATE is a granular powder, very concentrated: One pound treats 1,800 square feet of bench area. This material is completely water-soluble. 100 grams (makes 1 gallon) prepaid \$1.50; per lb., \$4.00; 25 lbs. \$87.50; 100 lbs., \$300.00. By express, charges collect.

P-40 IS TWO PER CENT SODIUM SELENATE and ninety-eight per cent carrier (superphosphate in the present material). It is a dilute material. Three pounds treat only 100 square feet of bench area. 3 lbs., \$1.50 prepaid; 25 lbs., \$4.25; 50 lbs., \$8.00; 100 lbs., \$15.00; by express, charges collect, 2,000 lbs., \$250.00.

Moths, mosquitoes, roaches, flies and other household pests are exterminated. Safe to use and harmless to clothing and furniture. One bomb will last the average household months. Aerosol bomb, contents 16 oz., retails, \$3.00; six for \$13.50; per carton of 12, \$24.00.

D. D. T.—Yamtox

Use of DDT alone seems to have a tendency to increase the infestation of other insects that it does not control. This may be due to killing off desirable parasites, or freeing them from competition. DDT Yamtox contains the full complement of rotenone necessary for the control of red spiders and other mites, thrips and aphids. The incorporation of 5% DDT in it widens its range of use to the satisfactory control of tarnished plant bug and leaf rollers. Where the plants are easily damaged, or where it is desired to spray open flowers of mums, or to dip the entire plant, as in the case of cyclamen mite, Yamtox DDT sure fits the bill. Price per gallon, \$12.00; case of 6—1 gallon cans; \$11.00 per gallon.

YAMTOX WITH BHC

Adding highly purified Benzene Hexachloride with rotenone is our Yamtox produces a spray material safe to use on most plants. This new combination will cover a wider range of insects than a rotenone spray and gives a fumigation effect from the gamma isomer of the BHC it contains. Control of Aphids and Thrips is more readily obtained with BHC than any other material available. Price \$18.00 per gallon. In ordering specify Yamtox with BHC or Yamtox with DDT.

Protexall Combats All Plant Pests

PROTEXALL, introduced by us as a one-shot spray or dust using new post-war insecticides and fungicides to combat almost all insects and plant diseases with one treatment, has been remarkably successful.

PROTEXALL CONTAINS

D. D. T., which kills most garden insects.

ROTENONE, fatal to aphids, bean beetles, and all others which may be unharmed by D. D. T.

FERMATE, harmless to all plants, and giving complete protection from many pests which resist other materials.

SULPHUR, which deals with most troubles which fermate does not.

Protexall spray is a powder which mixes easily with water. Protexall Dust comes mixed with a spreader and is ready for instant use. It is necessary to order the form you prefer and have the equipment to use, since the spray material does not make an efficient dust, and the dust cannot be used as a spray.

CHEMICAL WEED KILLER

NEW DANDYKILL WITH NITROGEN

Careful tests of Dandykill, the dry, soluble form of the miracle weed killer 2,4D have developed these important facts:

1—That chemical nitrogen in the Dandykill solution will stimulate growth so grass quickly spreads to vacant spaces left by dying weeds.
2—That Dandykill at normal strength destroys many seeds of crab grass and kills small crab grass plants.

3—That Dandykill one-half recommended strength used on bent greens and lawns, kills most weeds without injuring the grass, though occasional brief discoloration may result.
